Bachelor of Computer Application, 2020-2023

Arignar Anna Government Arts College , Villupuram

CGPA : 7.7

HSC (12th), 2019-2020

John Dewey Matric Hr.Sec.School, Villupuram

Percentage : 60

OBJECTIVE

Highly skilled and passionate Software Developer with a BCA degree and a strong foundation in Software development. Seeking a challenging position in the software industry to utilise my expertise in creating innovative and user-friendly Software applications.

EXPERIENCE

CI Global Technologies | Software Engineer
Jul 2023 - Present | Chennai

- I worked on a project called Teapioca, which is a digitized menu item configuration application developed using Flutter.
- Teapioca is a store management application that organizes users, roles, and items, and sets different prices based on regions.
- Digital applications are used to view the items that have been created.

PROJECTS

New Chat

- I developed the 'WhatsApp Redirector' app, featuring a seamless chatting experience through QR code generation and scanning. I implemented a user-friendly interface, eliminating the need for registration or contact access. Additionally, I facilitated direct communication between businesses and customers, enhancing customer engagement. The app is uploaded on the Google Play Store.
- Flutter, Figma, Android Studio

Date and Time Calculator

- The Date and Time Difference Calculator is a handy app that allows you to calculate the duration between two specific dates and times. It provides a simple and efficient way to determine the time elapsed or the time remaining between two events.
- Java, XML, Android Studio
- github.com/date_and_time_calculator

Hotel Room Management System

- The Hotel Management System is a command-line interface (CLI) application designed to streamline and automate various hotel management tasks. It provides hotel staff with a convenient and efficient way to manage room reservations, guest information, and other administrative tasks necessary for smooth hotel operations.
- Java, MySQL, JDBC, VS Code, MySQL Workbench
- github.com/hotel_room_management_system
